

Travel safely with your power banks and vapes

Your safety is our priority. Power banks, e-cigarettes and vapes have the potential to overheat, emit fumes and smoke or self-ignite and catch fire. If you want to carry these items never place them in your checked-in baggage. Only carry them with you inside the aircraft cabin by following the requirements below:

DO NOT

Do not charge your power banks, e-cigarettes or vapes on board the aircraft.

Do not move the seat if you drop a device in your seat. Inform cabin crew immediately.

Do not travel with any lithium battery powered equipment or power banks, that have damaged batteries or have been recalled by authorities / manufacturers due to safety reasons. (This includes using damaged or faulty cables onboard).

DO'S

Use in-seat USB ports or sockets where available, to charge your portable electronic devices (excluding power banks, e-cigarettes and vapes).

Keep the power bank in view, if using it to charge other allowed electronic devices. (Do not stow them in your carry-on bag or in the overhead bins while charging these other devices).

Keep devices containing lithium batteries and loose batteries away from flammable items such as perfumes when placed inside your carry-on bag.

Inform staff immediately should your device overheat, emit smoke/fumes or catches fire.

Always apply safety caps or cover air vents on e-cigarettes or vapes to prevent accidental activation.

Thank you for helping us keep everyone, including you, safe on every journey.
